

Course Description:

This course explores early civilizations, from ancient Greek society to the beginning of the Silk Road.

Students will study the geographical, political, social, and economic foundations of early civilizations. They'll examine the geography, early history, cultural development, and economic changes of civilizations like Rome, Persia, and China. The geographic focus will include the study of physical and political maps, economic development and resources, and migration patterns. Students will also study the development of philosophies and religions like Judaism, Christianity, Confucianism, and Taoism. Students' final grades will be based on their performance in a variety of assessment types: Workbooks, Discussion Boards, Checkpoints, a Final Exam, and a multistep project.

Major Concepts

- Greece
- Democracy
- Persians
- Rome
- China
- Christianity
